Lecture 8: Real applications and softwares

1. Real applications
   - Astronomy
   - Physics
   - Chemistry
   - Geology
   - Biology
   - Medicine
   - Social sciences
   - Engineering
2. Softwares
   - Official
   - Third-party

天体物理学

- 测光红移
  - 测光红移准确度提升[1]

[1] Jian Ma. "Photometric Redshifts with Copula Entropy". In: *arXiv preprint arXiv:2310.16633* (2023), Karthik Raja Selvan and John Soo Yue Han. "Enhancing Photometric Redshift Estimation with Morphology-Based Feature Selection via Copula Entropy". In: *APPC16: The 16th Asia Pacific Physics Conference*. 2025.

理论物理学

- 相关粒子系统
  - 平衡态相关粒子系统中熵的推导和计算[2]

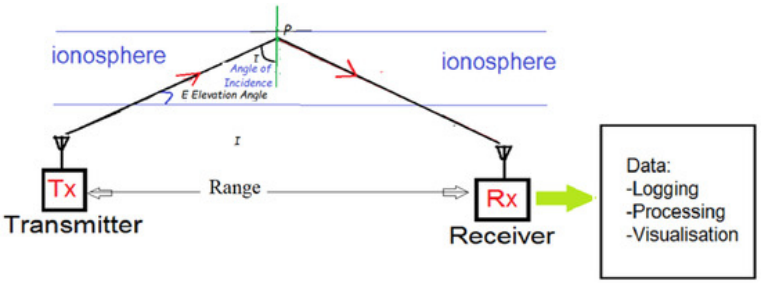

[2] Jian Ma. "On Thermodynamic Interpretation of Copula Entropy". In: *arXiv preprint arXiv:2111.14042* (2021). arXiv: 2111.14042 [cs.IT].

空间科学

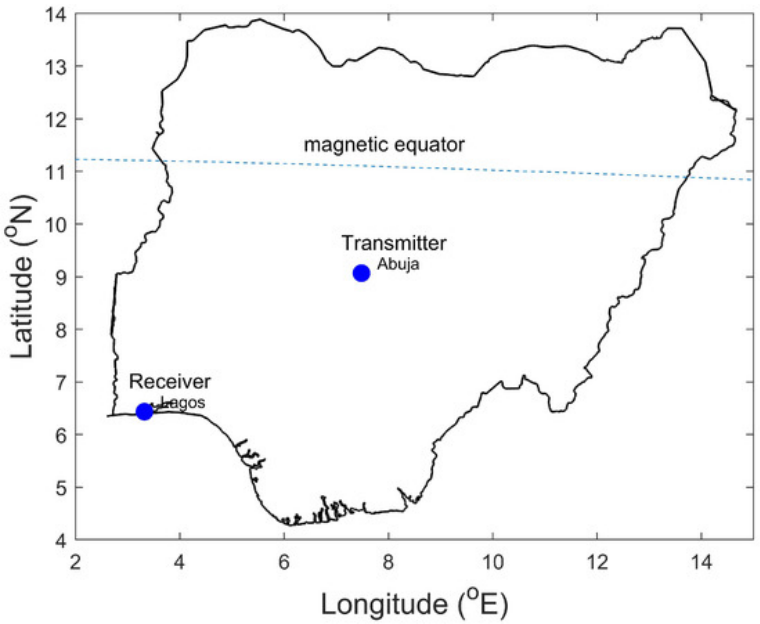

- 赤道电离层特性随季节变化分析
  - 基于 TE 分析赤道地区高频微波信号传输中 TEC 和 DFS 之间的非线性关系[3]

[3] Aderonke Akerele et al. "Complexity and Nonlinear Dependence of Ionospheric Electron Content and Doppler Frequency Shifts in Propagating HF Radio Signals within Equatorial Regions". In: *Atmosphere* 15.6 (2024), p. 654. DOI: 10.3390/atmos15060654. URL: https://www.mdpi.com/2073-4433/15/6/654.

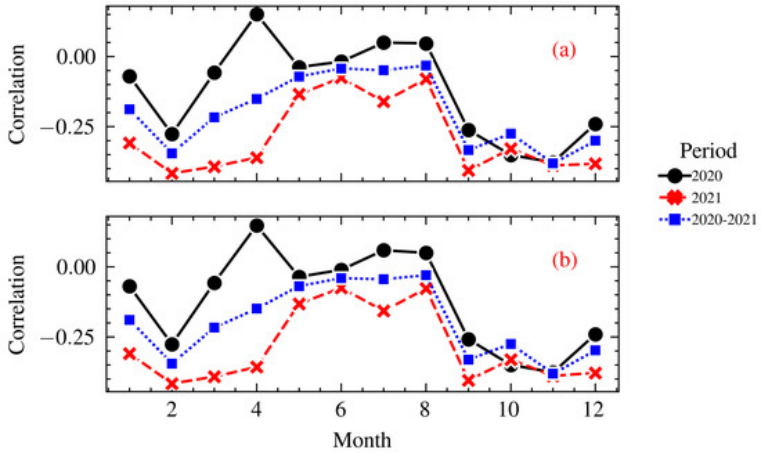

CASE 1: Ionosphere in equatorial regions by ICTP, etc.

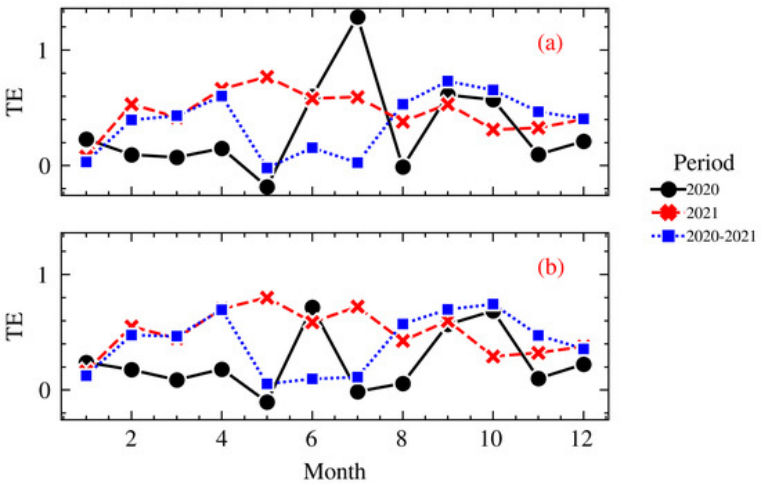

Experimental setup

Locations in Nigeria

Monthly correlation between VTEC and DFS

Monthly transfer entropy between VTEC and DFS

量子物理学

- 量子计算新概念
  - 提出了一种量子 CE 的理论框架[4]
- 量子态重构
  - 从所有上下文关联中重构量子态[5]

[4] Carmen Maria Constantin and Andreas Doering. "Contextual Entropy and Reconstruction of Quantum States – an Unified Framework based on Copula Entropy". In: *arXiv preprint arXiv:1208.2046* (2021). Unpublished version at August 28, 2021.

CASE 2: Quantum copula entropy by University of Oxford

Definition (Quantum Copula Entropy)

$$C_S(\rho_{AB}) = I(A:B) = S(\rho_A) + S(\rho_B) - S(\rho_{AB}) \tag{1}$$

Definition (Contextual Quantum Copula Entropy)

$$\mathcal{CH}(\rho_{AB}) = \{H_c^{C_A, C_B}(\rho_{AB})\}_{C_A, C_B} \tag{2}$$

Algorithm (Reconstructing Quantum States)

$$\min_{\rho \in \mathcal{D}} f(\rho) = \sum_{t=1}^{M} w_t \left[H_{C_t}(\rho) - H_{C_t}^{exp}\right]^2 \tag{3}$$

流体力学

- 离心泵性能预测
  - 利用 SMOGN 过采样技术和 GAKHO 超参数调节技术相结合的方法来进行离心泵性能预测[6]

[6] Yuhao Chen et al. "Research on performance prediction of a small sample centrifugal pump based on a pre-processing approach for imbalanced regression and key hyperparameters optimization". 化学信息学

- 分子设计
  - 设计具有特定属性的分子结构[10]

[10] Mario Wieser. "Learning Invariant Representations for Deep Latent Variable Models". PhD thesis. University of Basel, 2020, Mario Wieser et al. "Inverse Learning of Symmetries". In: *Advances in Neural Information Processing Systems*. Vol. 33. 2020, pp. 18004–18015.

CASE 3: Symmetry of molecules by Harvard and Basel

(a) Rotational symmetry transformation.

(b) Unknown symmetry transformation.

Figure 1: **Left:** a molecule is rotated by g admitting an analytical form. The distance matrix D between atoms is calculated by a known function f and remains unchanged for all rotations. **Right:** n samples $\{m, e\}^n$ where m is the molecule and e the bandgap energy. These samples approximate the function f whereas the class of functions g leading to the same bandgap energy is unknown.

材料学

- 耐热型含能材料分子设计
  - 含能材料热分解温度预测[11]
- 近 β 钛合金加工
  - 研究了近 β 钛合金在 β 区形变机制和材质演化之间的关系[12]
- 难熔多元合金分子设计
  - 提出将 EMTO 第一性原理计算与基于 CE 的特征选择方法相结合，构建 RMPEAs 物理属性预测模型[13]

地质学

- 岩相分类
  - 利用 CE 构建岩相分类模型[18]

[18] Jian Ma. "Facies Classification with Copula Entropy". In: *arXiv preprint arXiv:2501.14351* (2025).

地球物理学

- 土地干旱度分类
  - 考虑蒸散过程的土地干旱度分类[19]
- 北欧山地陆气耦合分析
  - 利用 CE 分析了芬瑟两个观测站的气象观测变量之间 CE 和解耦度量之间的关系[20]

[19] Yufeng Shan, Jiangfeng Wei, and Beilei Zan. "Improving Estimates of Land–Atmosphere Coupling Through a Novel Framework of Land Aridity Classification". In: *Geophysical Research Letters* 51.2 (2024), e2023GL106598. DOI: 10.1029/2023GL106598.

[20] Laura Mack, Marvin Kähnert, and Norbert Pirk. "Probabilistic modelling of atmosphere-surface coupling with a copula Bayesian network". In: *Environmental Modelling & Software* (2026). arXiv: 2509.11975 [physics.ao-ph]. URL: https://arxiv.org/abs/2509.11975.

CASE 4: Land-atmosphere coupling by University of Oslo

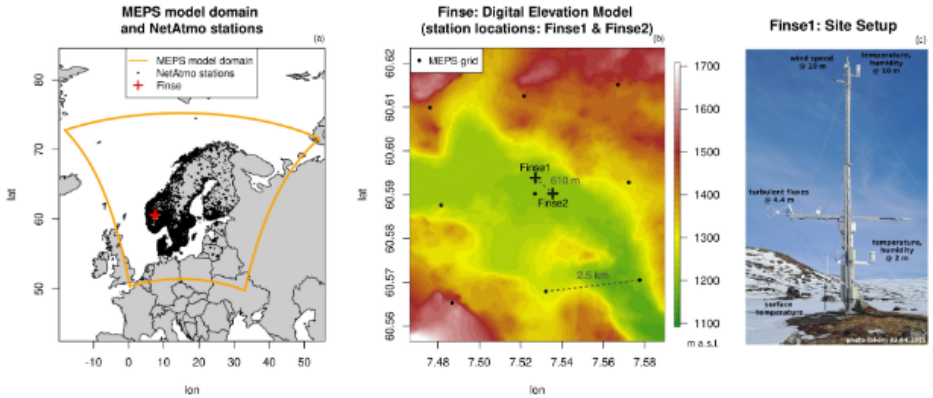

Figure 1: Used data sources: (a) Model domain of the NWP model MEPS and locations of the NetAtmo stations. (b) Surrounding of Finse and station locations. (c) Setup of the main site Finse1.

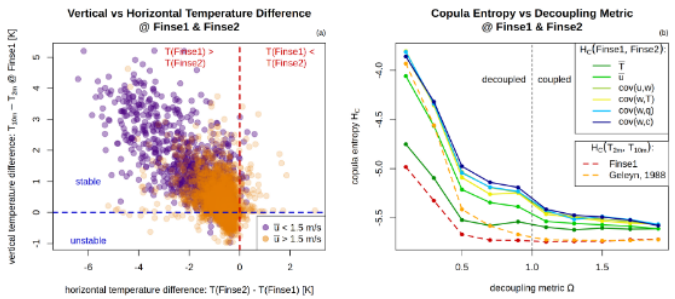

Figure 2: Relation of vertical and horizontal coupling: (a) Horizontal temperature difference between Finse1 and Finse2 versus vertical temperature difference at Finse1 color-coded based on a wind speed threshold (30 minutes temporal average), (b) decoupling metric at Finse1 versus copula entropy between Finse1 and Finse2 of temperature, wind speed, and the covariances corresponding to the fluxes of momentum cov(u,w), sensible heat cov(w,T), latent heat cov(q,w) and CO_2 cov(c,w) (30 minutes temporal average). Entropy calculation is based on time series of the same length to avoid a sampling size bias.
